16th European Forest Pedagogics Congress

Programme

How to learn in and with nature in times of climate crisis?
European perspectives and solutions

Zurich, Switzerland, 11th – 13th May 2022

It is clear that education must contribute to combating climate change and that environmental education is predestined for this role. This is especially true for forest pedagogy and nature-based environmental education. But how can we do this and how can it be effective?

- What does contemporary forest pedagogy look like in times of climate change? What projects, programmes and approaches are there?
- How can/should forest pedagogy inputs/interventions be designed so that they contribute against climate change? In addition, how can they be developed further?
- How can insights from climate education enrich the methodology of forest pedagogy?

These and similar questions will be raised and discussed at the European Forest Pedagogics Congress 2022
